

Precision at its best.

PRODUCING QUALITY

SAMPLING AND SMALL SERIES IN FOCUS

- Since our foundation in the year 2012 we specialise in the sampling of injection moulds and the production of plastic parts in small series.
- In the field of sampling we work closely together with Finke Formenbau. External customers are served particularly in the area of niche vehicles and products in the non-automotive surrounding.
- For both fields of activity we employ a modern machine park with injection moulding machines from 250tonnes up to 1.600tonnes. Our company is certified according with ISO 9001 and ISO/TS 16949.

Markus Finke
Managing Director

René Tillmann
Factory Manager

TAILORED APPLICATION TECHNOLOGY

- Technical centre for injection moulds from Finke Formenbau and external customers
- Certification in 2016 according with ISO/TS 16949
- Injection moulding of small series for niche vehicles and non-automotive/other products
- Logistics with highly modern RFID-Technology, permanent stock control according with FIFO-principle (First in - First out)
- Store area 2.500sqm
- Own truck fleet
- Digitally guided process control
- Injection moulding machines from 250tonnes up to 1.600tonnes
- Sampling/production of 1K, 2K, turntable and indexing tools
- Whole process including unloading, cutting, scarfing, assembly and confectioning can be mapped

HIGHLIGHTS FINKE APPLICATION TECHNOLOGY

- Sampling in own technical centre
- Machine park from 250tonnes up to 1.600tonnes
- Sampling 1K and 2K
- Delivery of small series

HIGHLIGHTS INJECTIONMOULDING TECHNOLOGY

- Complete process chain presentable
- For the product tailored removal and cutting fixture
- Computerised quality control

HIGHLIGHTS LOGISTICS

- Own truck fleet up to 40tonnes
- Flexible transport options
- 24hr service available

- To offer highest performance means for us also to carry responsibility:
- Towards our customers, offering security for precision and reliability of our moulds with the quality certificate „made in Germany“ and „made by Finke“.
- Towards our colleagues, their competence through continuous further education we foster their development. Their wellbeing is also fostered by an in house health management scheme, and their engagement and enthusiasm for technical innovation is supported by an open enterprise culture built on teamwork cooperation and hierarchy free communication.

TO LIVE RESPONSIBILITY TOWARDS OUR CUSTOMERS, COLLEAGUES AND ENVIRONMENT

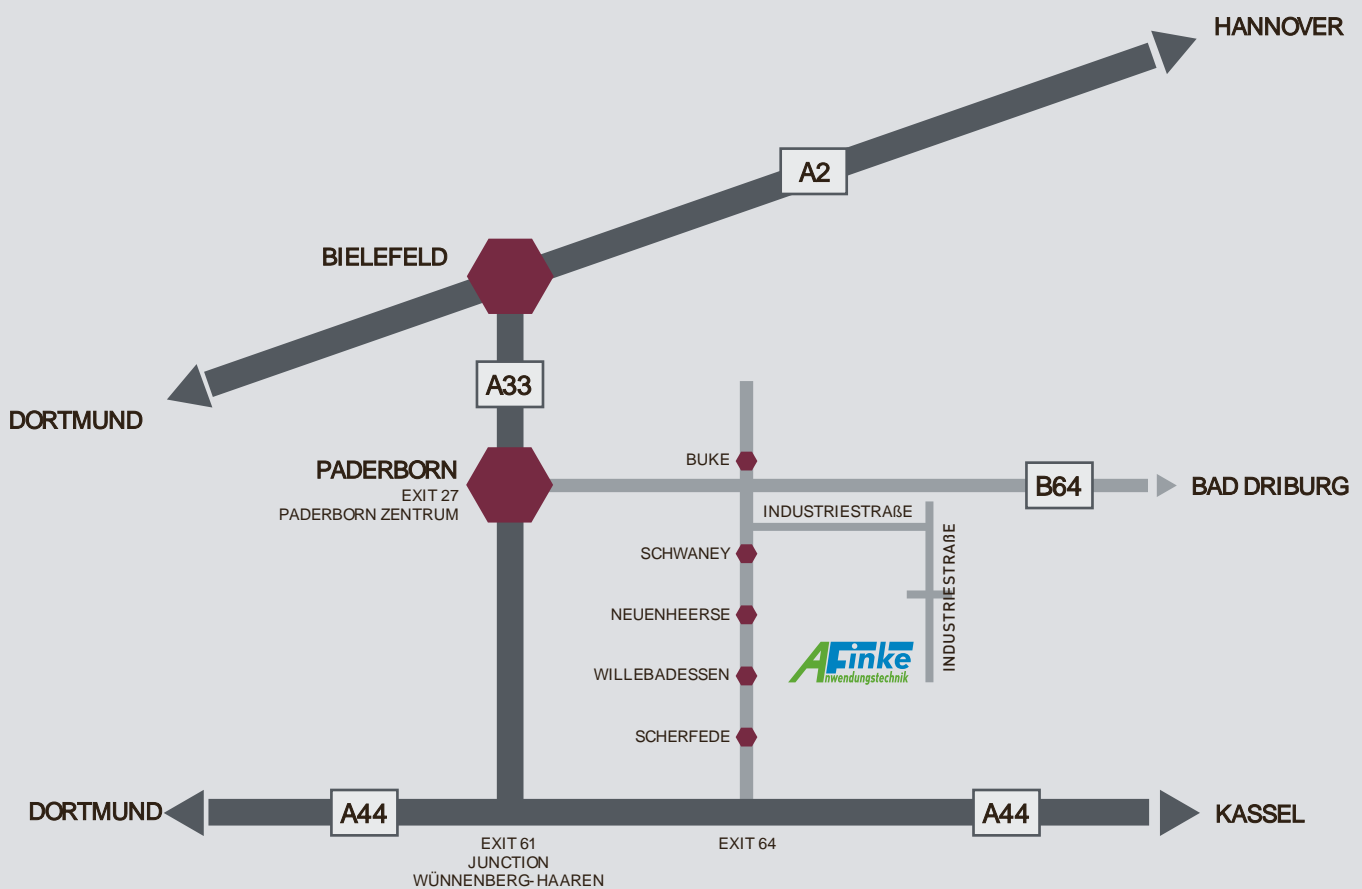

- Towards the younger generation, their entitlement to a qualified start to their working life corresponds with our high training engagement in their own training department.
- Towards the environment, with gentle handling of our natural resources we show our respect by reducing emission and wasteful production processes and pursue continuously means of reducing our energy usage. The windmill at our door step is a striking example.

A PARTNER OF FINKE ANWENDUNGSTECHNIK

- Integrated development and production of injection moulds and equipment for the plastics industry
- 7.000sqm production area (Mould making shop and processing application)
- Extensive product spectrum from component part to complete solution and mould weight up to 20tonnes
- Maximum mould dimensions 2.500mm x 1.500mm
- Continuous quality management on the certified basis according with DIN EN ISO 9001:2008
- Own energy supply with windmill and solar panels
- High speed volume of output with 3 shifts work
- Integrated gauge and fixture production
- Associated injection moulding for sampling and pre-series parts
- Complete handling of logistics with own truck fleet
- Full-Line-Services including servicing and repair at the destination

Have you any questions? Do you wish more information? Just give us a phone call or send a mail. Or even better visit us and assure yourself of the benefits of a cooperation, to which we cordially invite you.
